

ASSEMBLY INSTRUCTIONS FOR

L.N.E.R. K3 MOGUL

(Designed to take the Triang 2-6-2 Chassis)

A "Finecast" kit

This model of the K3 of typical Gresley N.E. design is a most useful mixed traffic loco able to haul fast freight trains at speeds up to the seventies. With 3 cylinders, 5 ft. 8 in. driving wheels and a boiler diameter of 6 ft., its all-up weight is 124 tons.

The model has been designed to take the Triang 2-6-2 chassis which is modified to a 2-6-0 (see details at top of drawing). It is of course possible to hand build ones own chassis. (It is hoped that at a later date we will produce a chassis for the scale enthusiast to fit with his own wheels). There is room for 18 mm. gauge if desired.

Loco.—Cement boiler sides 3 and 4 together, at the same time cement to spectacle plate (10). (Make sure that the tongues on boiler are not too tight a fit). Next cement in place smoke box door (8) and leave to one side. Fit front buffer beam (7) to footplate cab side units (1) and (2) also saddle (6) in place. Next fit boiler unit to foot plate taking care to insert boiler bottom (5). Next fit cab roof (9) followed by other components in any order. (Note: some people find it a good

plan to paint the boiler before fitting to footplate, this is especially useful if one is painting the lines on the boiler bands).

Tender.—Assembly is simple and straightforward. Do not forget to put the wheels in at the right time, once the sides are cemented to the floor and base on both sides it is not possible to spring aside to insert wheels. To make sure that all is square place on plate glass (mirror will do) and see that all wheels are touching and there is no rocking action.

If it intended to fit three link or screw link couplings, slot the buffer beam with small hack saw first. Triang or Peco can also be fitted.

Should any part be accidentally broken during assembly, return part (quoting number) together with **REPLACEMENT PARTS** sufficient for return postage it will be sent.

Handling Charges - 50p per Part except Boiler Sides, Tender Sides & Footplate castings - £1.00 each.

Normally parts sent by return post
